BCF TEXTURED YARN

BCF stands for "bulked continuous filament" and refers to a one step process where one or multiple filament yarns are tangled by airstream. The end use for BCF yarns is usually carpets as BCF yarns are very bulky.

If using the texturizing region that majorly uses hot air current and over feed, the yarn becomes puffy that is commonly referred to as BCF yarn (Bulked Continuous Filament). In the absence of the texturizing unit and the production of propylene yarn without the puffiness, "CF" (Continuous Filament) yarn is produced.

Usage of BCF Yarn

The use of BCF yarns can be found in the carpet manufacturing industry, all types of substructures, carpets, rugs, carpets, carpets, yarns, flooring, cellar and lounge furniture.

Also, these yarns are used for other threads that require yarns of high volumetricity and coating coefficient.

Advantages

- Primitive and dominant method
- Fast
- Does not depend on testing environment
- High resolution
- Pixel-level resolution
- Not affected by yarn hairiness
- More accurate
